SDC HACKATHON 2026 · DOMAIN 2

PaySah

From payment to pickup, every screenshot is checked before goods leave the shop.

Follow one RM128 order through a small shop: the customer, the cashier, the owner, the bank, and the tools behind PaySah.

Open the live app ↗

Start the walk-through ↓

SCROLL TO MOVE THROUGH THE 7 STEPS

1 Pay · 2 Send · 3 AI reads · 4 Match · 5 Cashier · 6 Owner · 7 Release · + Online sellers · ★ Value

1 CUSTOMER PAYS

The customer buys and pays by bank transfer.

DEMO-A-128 RM 128.00

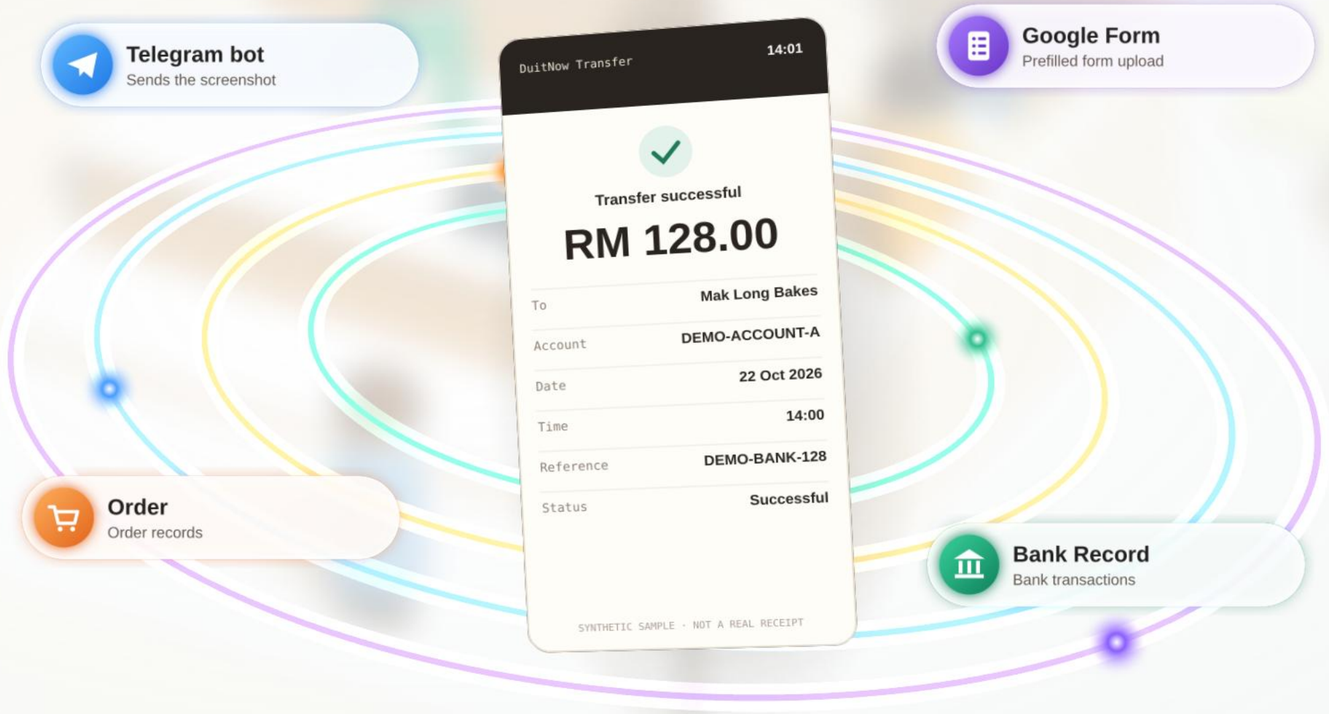

The money goes to the shop's bank account. The customer's screenshot is only a clue. **It does not prove the money arrived.**

2 SENDS THE SCREENSHOT

Telegram or Google Form, straight into PaySah.

- The shop shares a link for this order, valid for 24 hours.
- The customer uploads through the Telegram bot or a prefilled Google Form (forwarded by Apps Script).
- Staff never download and re-upload. They can still upload in the dashboard if needed.
- The image is stored privately on Replit with a SHA-256 hash.

3 AI READS THE RECEIPT

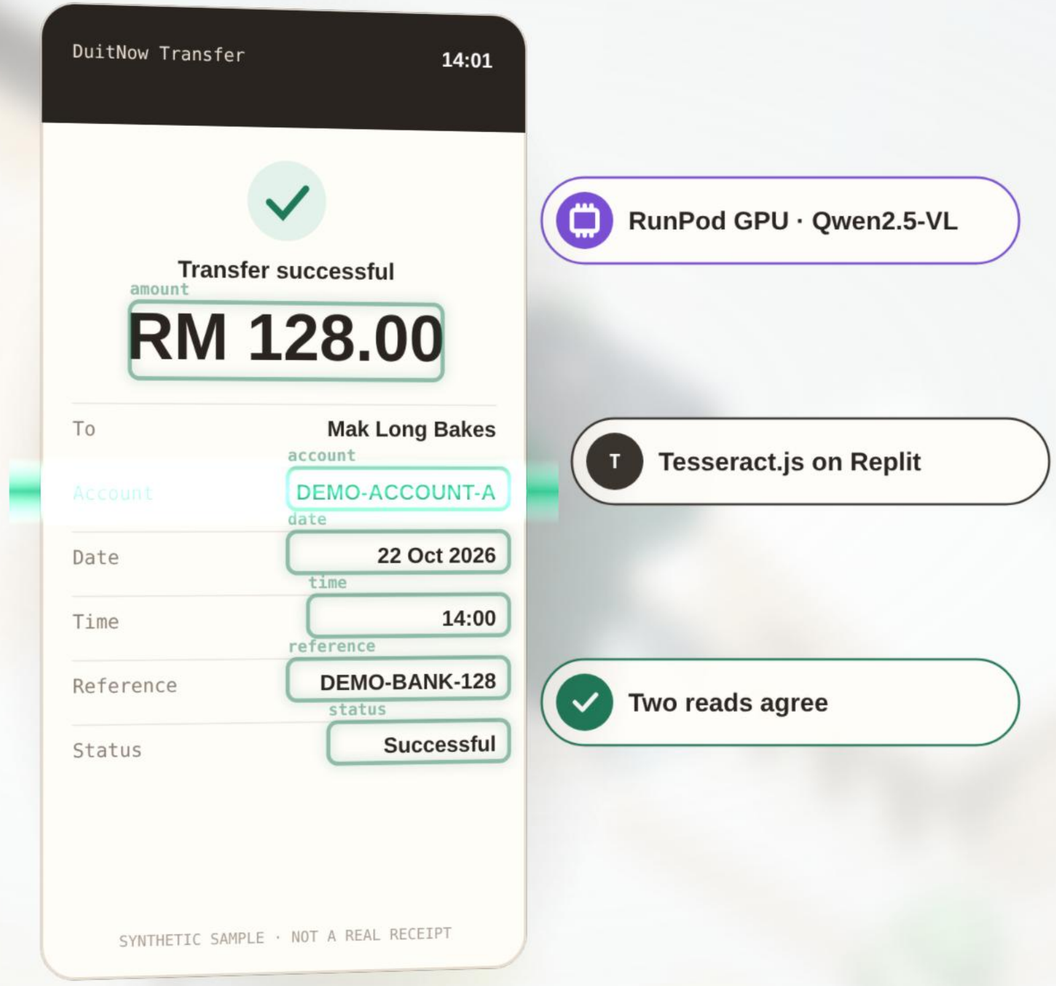

A GPU model reads it. CPU OCR reads it again.

RM 128.00 · 22 Oct 2026 · 14:00 · Acc DEMO-ACCOUNT-A · Ref DEMO-BANK-128 · Successful

A receipt worker on Replit sends the image to **Qwen2.5-VL-7B on RunPod**, then reads it again with **Tesseract.js**. Any field that differs goes to the Owner.

GPU	CPU
248 / 252	190 / 252

Fields read correctly on 36 synthetic test receipts.

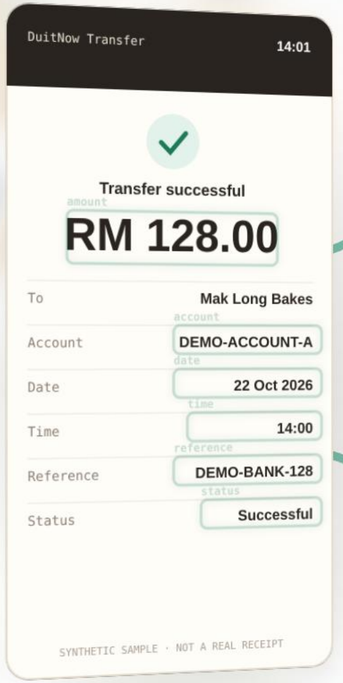

4 CHECKS THE ORDER AND BANK

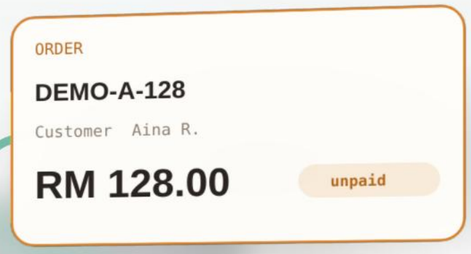

Receipt, order and bank record must agree.

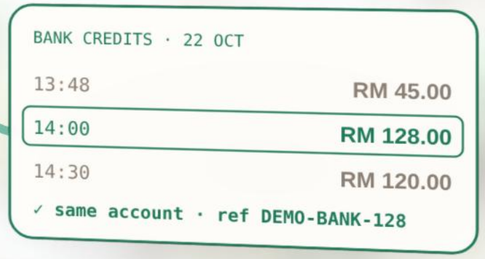

- Amount equals the order total
- Paid into the shop's own account
- A bank credit with the same reference within 24 hours, not used before
- Not a duplicate, money request or scheduled transfer

Match → ready to confirm

Anything off → blocked, or sent to the Owner

5 CASHIER CONFIRMS

Clean match up to RM500? The cashier confirms.

ORDER DEMO-A-128
RM 128.00

RESULT
MATCHED

The cashier sees the extracted fields and the evidence, then confirms payment. The order moves from **Unpaid** to **Paid**.

6 OWNER APPROVES (IF NEEDED)

Bigger or unusual cases go to the Owner.

`> RM500` `GPU/CPU disagree` `Duplicate reference` `Manually corrected`

The Owner approves or rejects with a reason, for example order DEMO-A-780 at RM 780. **The Owner cannot override missing bank evidence:** partial payments, wrong accounts, amount mismatches and missing bank records stay unpaid.

7 RELEASE THE GOODS

Paid first. Then a separate release.

PAYMENT	RELEASE
Unpaid → Paid	On hold → Released

Only a fully paid order can be released, and orders above RM500 need the Owner. Every step, who did it, when and why, is saved in the activity log.

HOW WE BUILT IT

Replit runs the shop's back office. RunPod reads.

INTAKE
Telegram bot · Google Form + Apps Script

WEB
React 19 · Vite

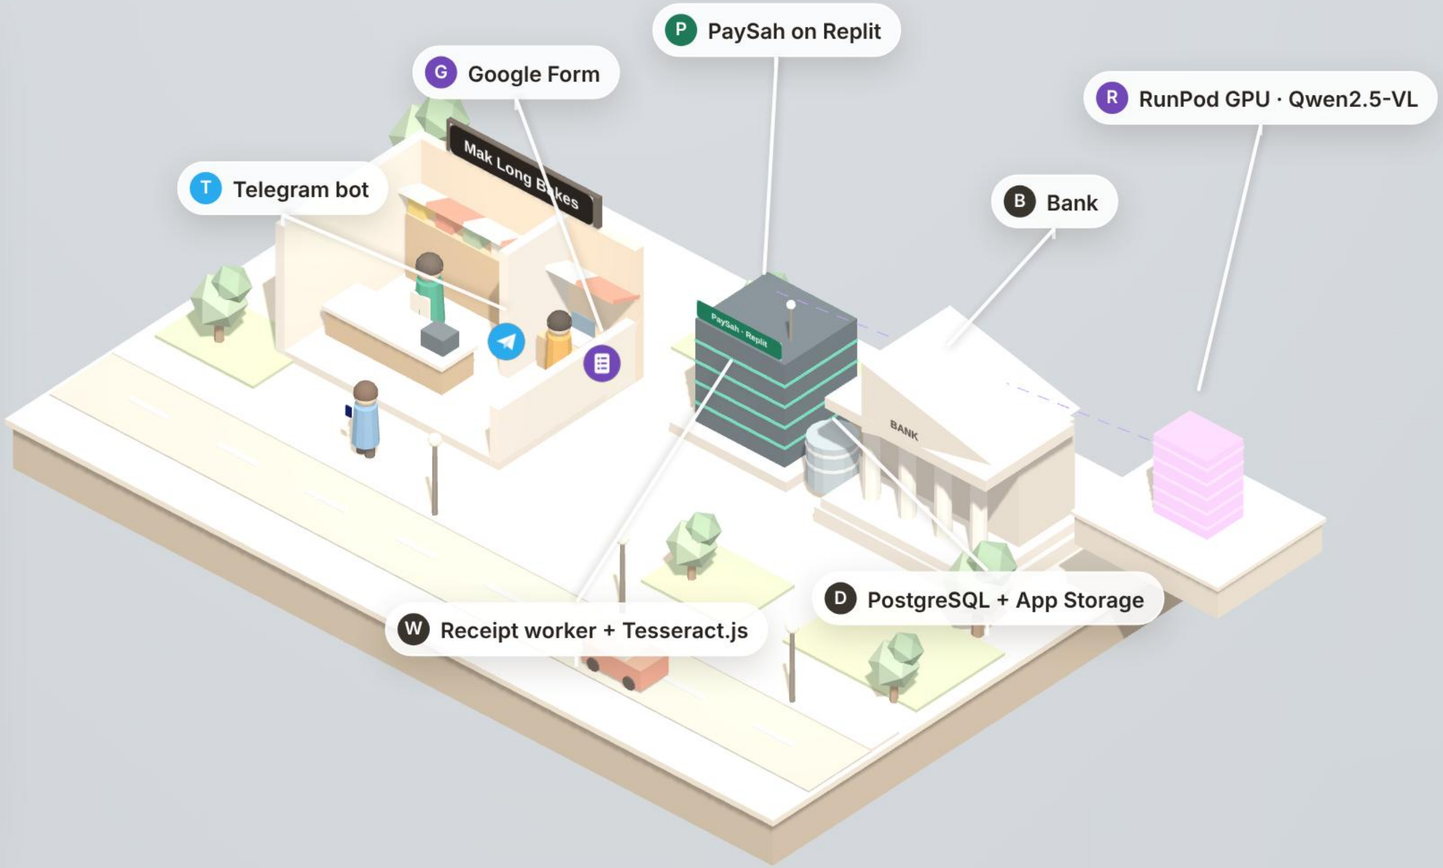

API
Node.js 24 · Express 5 · Zod · Multer

WORKER
Job queue · Sharp · Tesseract.js 7

DATA
PostgreSQL 17 · private App Storage

GPU
RunPod Serverless vLLM · Qwen2.5-VL-7B

Everything except the GPU model runs on Replit at paysah.replit.app.

1 Pay · 2 Send · 3 AI reads · 4 Match · 5 Cashier · 6 Owner · 7 Release · + Online sellers · ★ Value

BUILT TO BE CAREFUL

Less manual work. No guessing about money.

DOWNLOADS / UPLOADS PER RECEIPT
2 → 0

Targets SDG 8.2 and 8.3. All orders, receipts and bank records here are synthetic. No live bank or Orbyte connection is included; Orbyte integration is planned.

Try PaySah ↗

NOT JUST SHOPS

Selling on RedNote, Facebook or Instagram? Same check.

RedNote Facebook Instagram

Many small sellers take orders in DMs and get paid by bank transfer, outside Shopee or Lazada checkout. No platform holds the money, so **a screenshot is all they get.**

- Create the order in PaySah and paste the 24-hour link into the chat.
- The buyer sends the screenshot through Telegram or Google Form.
- Ship only after the order turns Paid.

BUSINESS VALUE

Less loss.
Less checking.
Clear records.

Stop losing stock
No matching bank credit, no Paid status. Goods stay on hold.

Less manual checking
No more opening the bank app for every order. Downloads / uploads per receipt: 2 → 0.

Owner time where it counts
The cashier clears routine orders. The Owner only sees big or risky ones.

Every step on record
Who submitted, checked, approved and released, with time and reason.

Buyers keep paying the way they already do, by bank transfer. Nothing new to install for them.
